

Database Operations Runbook

Troubleshooting Database Issues

- Step 1: Verify database availability.
- Step 2: Check database latency metrics.
- Step 3: Review active connections.
- Step 4: Verify connection pool utilization.
- Step 5: Identify long-running queries.
- Step 6: Check database CPU and memory usage.

Escalation Criteria:

- Latency greater than 3 seconds
- Connection pool utilization above 90%
- Error rate above 5%
